

I can't believe the FCC would even consider trying to ban local content on Satellite radio. I love the local traffic and weather provided by XM. I use this station once or twice a day, for perhaps 5 minutes at a time. This feature has saved my sanity. Pervious to this service I had to depend on some crackpot DJ who plays crap music giving me intermittent updates, usually to late as well. Driving in the Boston area is frustrating enough, putting up with poor information updates for horrible on-air personalities is going to push someone over the edge. Help save our sanity and reject petition 04-160.
